2 AUSTRALIA DOMESTIC PAYMENTS FILE FORMATS

This section details the file formats that can be used for Australian Domestic Payments:

- ABA File Format
- CSV File Format

2.1 ABA File Format

This section details the ABA file format that is used for Australian Domestic Payments.

The ABA file format allows a user to import an ABA formatted file as one or more batches of payment instructions.

Note: The ABA file conforms to the Australian Payments Clearing Associations (APCA) file specifications.

2.1.1 ABA File Layout and Character Set

An ABA file can contain one or more batches of payment instructions. The records in the ABA file to be imported must follow a defined order. Each batch must:

- Start with a Descriptive Record
- Contain one or more Details Record(s)
- End with a Batch Control Record

The format specifications for each of these record types are outlined in detail further in this document.

The following character set is allowed in an ABA file:

- Fields that are marked '**Alpha**' (Alphanumeric) in the 'Type' column are limited to:
 - Letters: A-Z, a-z
 - Numbers: 0-9
 - The following Characters: spaces (), ampersands (&), apostrophes ('), commas (,), hyphens (-), full stops (.), forward slashes (/), plus sign (+), dollar sign (\$), exclamation mark (!), percentage sign (%), left parenthesis ((), right parenthesis ()), asterisk (*), number sign (#), equal sign (=), colon (:), question mark (?), left square bracket ([), right square bracket (]), underscore (_), circumflex (^) and the at symbol (@)
 - 'Optional' Alphanumeric fields must be filled with spaces if no data exists
- Fields that are marked '**Numeric**' in the 'Type' column are limited to:
 - Numbers: 0-9
 - 'Optional' Numeric fields must be filled with zeros if no data exists

ANZ Transactive – Global requires ABA files to be prepared as 120 byte fixed length records and must be separated by CRLF (carriage-return/line feed, Hex 0D0A) end of line characters. This must be consistent for the whole file.

2.1.2 Descriptive Record (0)

The Descriptive Record contains Direct Entry payment batch header details.

The payment funding account can be specified using one of the following methods (in order of preference):

1. Provide a BSB and Account Number in the Descriptive Record
2. Create a self-balancing file in your accounting software which will add an extra line in the file to represent the total debit for the payment

Note: If neither of these methods is used, the system will choose the trace account nominated for the first transaction in the payment. If a batch in your file contains an invalid DE User ID, the batch will go into a Needs Repair status and you are able to edit the payment and select the correct DE User ID.

Field Description	Type	Notes	Start Position	End Position	Length	Mandatory/Optional
Record type	Numeric	Must be '0'	1	1	1	Mandatory

Reserved	Alpha	Blank filled	81	120	40	Optional

2.2 ABA – Osko File Format

If your Organisation is enabled with Osko, you can import an ABA file that will be processed using the Osko payment method. This will allow you to have the transactions processed in near real time.

Refer to the [ABA File Format](#) section for further details.

Notes:

- Each transaction in an ABA – Osko batch will be processed individually, meaning that there will be one debit on your statement for each credit
- The ABA file format can only support payments addressed to a BSB and Account Number (i.e. payments cannot be addressed to a PayID in an ABA file)
- ABA – Osko file will only support an 18 character reference per beneficiary

2.3 CSV File Format

The CSV file format allows a user to import a CSV file as one batch of payment instructions.

2.3.1 CSV File Layout and Character Set

A valid CSV file consists of only one record type - Detail Record. Direct Entry detail items will be created for each Detail Record in the CSV file.

The format specifications for the Detail Record is are outlined in detail further in this document.

The following character set is allowed in a CSV file:

- Fields that are marked 'Alpha' (Alphanumeric) in the 'Type' column are limited to:
 - Letters: A-Z, a-z
 - Numbers: 0-9
 - The following Characters: spaces (), ampersands (&), apostrophes ('), commas (,), hyphens (-), full stops (.), forward slashes (/), plus sign (+), dollar sign (\$), exclamation mark (!), percentage sign (%), left parenthesis ((), right parenthesis ()), asterisk (*), number sign (#), equal sign (=), colon (:), question mark (?), left square bracket ([), right square bracket (]), underscore (_), circumflex (^) and the at symbol (@)
- Fields that are marked 'Numeric' in the 'Type' column are limited to:
 - Numbers: 0-9

2.3.2 Detail Record

Each Detail Record contains information used to create one payment instruction (Detail Item). There may be many Detail Records in one CSV file.

All fields must be separated by a comma (,) and may be enclosed in double-quotes (") if required. Each record will end with CRLF (carriage-return/line feed).

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Reserved	Alpha	Not used by ANZ Transactive – Global.	1	NA	Optional

- No spaces at the end of a field
- Local language (Simplified Chinese) will be supported only for domestic non cross-border transactions
- For cross-border / TT payments, valid character set is as below:
 - a b c d e f g h i j k l m n o p q r s t u v w x y z
 - A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
 - 0 1 2 3 4 5 6 7 8 9
 - / - ? : () . , ' + { }
 - CR LF Space

Key - Type:

- A - Alpha
- D - Date
- N - Numeric
- M - Mandatory
- O - Optional
- C - Conditional
- N/A - Not Applicable

Notes:

- Any field marked M, must be present in the file
- Any field marked C, is conditional and may be required based on the payment method used
- Batches containing mixed payment types will be split into domestic and international payment batches

3.1.1 Header Detail Record

The Header Detail record detail must appear at the beginning of the file and contains common data applicable to each individual payment contained in the batch.

One single header record only should be present in the file.

No.	Field Name	Start Position	Length	Data Type	M/O/C	Local Language Support	Description/Notes
1	Record Type	1	3	Char	M	No	Indicator to identify record type. Always 'HDR'.
2	Debit Account	4	30	Char	M	No	Ordering customer debit account number. Applies to all transactions in the file

3. NZ CSV without Control Record

4.1 NZ CSV

The NZ CSV file format allows a user to import a Domestic Payment file into ANZ Transactive – Global as one or more batches of payment instructions.

4.1.1 File Layout and Character Set

An NZ CSV file can contain one or more batches of payment instructions. The records in the file to be imported must follow a defined order. Each batch must:

- Start with a Descriptive Record
- Contain one or more Detail Record(s)
- End with a Batch Control Record

The format specifications for each of these record types are outlined in detail further in this document.

The following character set is allowed in an NZ Domestic Payment file:

- Character fields can contain both alpha and numeric values
- Numeric fields should only have digit values (0-9)
- The delimiter between fields is a comma, so text fields such as Other Party Name should not contain commas. There may optionally be a comma after the final field.

4.1.2 Descriptive Record

The Descriptive Record contains Domestic Payment batch header details.

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Record Type	Numeric	Must be "1"	1	1	Mandatory
Batch Type	Numeric	"D" = Debit Batch / "C" = Credit Batch	2	1	Mandatory
Payment Date	Numeric	In The Form YYYYMMDD (e.g. 20100130)	3	8	Mandatory
Payment Time	Numeric	HHMM (e.g. 1330 is 1.30pm)	4	4	Optional
Batch Creation Date	Numeric	Value may be omitted or a YYYYMMDD format value will be ignored by Transactive	5	8	Optional
Funds Account	Numeric	In Form BBbbbAAAAAASS (2, 4, 7, 2). No hyphens	6	15	Mandatory
DD Code	Numeric	Mandatory for Debit Batches	7	7	Conditional
Reporting Method	Numeric	"S" = Single / "M" = Multiple. The Multiple Reporting Method has a threshold of 4999 transaction items. If the threshold is exceeded Transactive will update the Reporting Method to 'Single' upon validation of the file. Customers will not be notified via the front-end.	8	1	Mandatory
Dishonour Account	Numeric	In Form BBbbbAAAAAASS (2, 4, 7, 2). No hyphens	9	15	Mandatory
Batch Name	Alphanumeric	The name given to the batch being created. Can be used to match an existing Confidential Data Group; select Derive from the file from the Upload Payment File screen.	10	12	Mandatory

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Originator Particulars	Alphanumeric	Reference details which are captured by the originator	11	12	Optional
Originator Analysis Code	Alphanumeric	Reference details which are captured by the originator	12	12	Optional
Originator Reference	Alphanumeric	Reference details which are captured by the originator	13	12	Optional
Reserved	-	Field reserved for future use	14	-	Optional
Reserved	-	Field reserved for future use	15	-	Optional
Reserved	-	Field reserved for future use	16	-	Optional

4.1.3 Detail Record

One or more Detail Items can be included in a single NZ Domestic Payment batch.

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Record Type	Numeric	Must be "2"	1	1	Mandatory
Account Number to be CREDITED or DEBITED	Numeric	In Form BBbbbAAAAAAASS (2, 4, 7, 2), BBbbbAAAAAAASSS (2, 4, 7, 3) or BBbbbAAAAAAASSS (2, 4, 8, 3). No hyphens	2	17	Mandatory
Transaction Code	Numeric	The transaction code for the item. The following codes are available: 50 - Credit 52 - Payroll 00 - Debit	3	2	Mandatory
Amount	Numeric	Amount must be less than or equal to 99999999.99 2 decimal places are implied (e.g. \$10.21 is recorded as 1021)	4	10	Mandatory
Other Party Name	Alphanumeric	Party Receiving Payment	5	32	Mandatory
Other Party Particulars	Alphanumeric	Other Party Statement Details	6	12	Optional
Other Party Analysis Code	Alphanumeric	Other Party Statement Details	7	12	Optional
Other Party Reference	Alphanumeric	Other Party Statement Details	8	12	Optional
Originator Particulars	Alphanumeric	Only applicable if Reporting Method is "M". If blank, will populate with Originator Particulars in Batch Header.	9	12	Optional
Originator Analysis Code	Alphanumeric	Only applicable if Reporting Method is "M". If blank, will populate with Originator Code in Batch Header.	10	12	Optional
Originator Reference	Alphanumeric	Only applicable if Reporting Method is "M". If blank, will populate with Originator Reference in Batch Header.	11	12	Optional
Reserved	-	Field reserved for future use	12	-	Optional
Reserved	-	Field reserved for future use	13	-	Optional

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Reserved	-	Field reserved for future use	14	-	Optional

4.1.4 Batch Control Record

The Control Record contains details relating to the Hash Total, the total number of items and the debit/credit totals for a batch.

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Record Type	Numeric	Must be "3"	1	1	Mandatory
Batch Debit Total Amount	Numeric	Value of all Debit transactions in the batch. 2 decimal places are implied (e.g. \$10.21 is recorded as 1021)	2	10	Mandatory
Batch Credit Total Amount	Numeric	Value of all Credit transactions in the batch. 2 decimal places are implied (e.g. \$10.21 is recorded as 1021)	3	10	Mandatory
Batch Total Item Count	Numeric	Total number of Transactions in the batch	4	6	Mandatory
Hash Total	Numeric	Sum of Branch/Account Numbers	5	11	Optional
Reserved	-	Field reserved for future use	6	-	Optional
Reserved	-	Field reserved for future use	7	-	Optional
Reserved	-	Field reserved for future use	8	-	Optional

Note: The hash total is calculated using the branch and account numbers in each transaction record. The bank number and account suffix are not used when calculating the hash total. If the account number is 8 digits then the left most digit is excluded from the calculations.

Example:

```
01 0123 0456789 00
06 0475 0123456 02
11 6100 1234567 040
03 0321 00987654 030
  7019 2802466
```

The hash total is therefore 70192802466.

If the hash total is more than 11 characters, exclude the characters on the left.

4.2 NZ CSV with Control Record

The NZ CSV with Control Record file format allows a user to import a CSV file containing payment details. The user will enter the header information when importing the file.

4.2.1 File Layout and Character Set

A valid NZ CSV with Control Record consists of the following record types:

- A Descriptive Record
- One or more Detail Record(s)
- A Batch Control Record

The format specifications for each of these record types are outlined in detail further in this document.

The following character set is allowed in a CSV file:

- Character fields can contain both alpha and numeric values
- Numeric fields should only have digit values (0-9)

The delimiter between fields is a comma, so text fields such as Other Party Name should not contain commas. There may optionally be a comma after the final field of each record

4.2.2 Descriptive Record

The Descriptive Record contains Domestic Payment batch header details.

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Record Type	Numeric	Must be '1'	1	1	Mandatory
Subscriber ID	Numeric	Contents will be ignored	2	16	Optional
Batch Number	Numeric	Contents will be ignored	3	2	Optional
Null	Numeric	Contents will be ignored	4	4	Optional
Subscriber's Account Number	Numeric	Contents will be ignored	5	15	Optional
Batch Type	Numeric	Contents will be ignored	6	1	Optional
Batch Due Date	Numeric	Contents will be ignored	7	8	Optional
Batch Creation Date	Numeric	Contents will be ignored	8	8	Optional

4.2.3 Detail Record

Each Detail Record contains information used to create one payment instruction (Detail Item). There may be many Detail Records in one CSV file. Other required detail item fields are inherited from the Batch Header and can subsequently be changed.

All fields must be separated by a comma (,) and each record will end with CRLF (carriage-return/line feed).

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Record Type	Numeric	Must be '2'	1	1	Mandatory
Account Number	Numeric	In Form BBbbbbAAAAAAASS (2, 4, 7, 2), or BBbbbbAAAAAAASSS (2, 4, 7, 3) or BBbbbbAAAAAAASSS (2, 4, 8, 3). No hyphens.	2	17	Mandatory
Transaction Code	Numeric	The transaction code for the item. The following codes are available: 50 - Credit 52 - Payroll 00 - Debit	3	2	Mandatory

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Amount	Numeric	The amount is in cents. No Dollar Signs, Commas or Decimal Points.	4	10	Mandatory
Other Party Name	Alphanumeric	Party Receiving Payment	5	32	Mandatory
Other Party Reference	Alphanumeric	Other Party Statement Details	6	12	Optional
Other Party Analysis Code	Alphanumeric	Other Party Statement Details	7	12	Optional
Other Party Alpha Reference	Alphanumeric	Not Used (but must be allowed for)	8	12	Optional
Other Party Particulars	Alphanumeric	Other Party Statement Details	9	12	Optional
Originator Name	Alphanumeric	Name of Party Making Payment. Contents will be ignored (since the payer's name will be the 'Funds Account Name' from the batch header details).	10	20	Optional
Originator Analysis Code	Alphanumeric	Details on customer's Statement	11	12	Optional
Originator Reference	Alphanumeric	Details on customer's Statement	12	12	Optional
Originator Particulars	Alphanumeric	Details on customer's Statement	13	12	Optional

4.2.4 Batch Control Record

The Batch Control Record contains details relating to the total number of items, the Hash Total and debit or credit totals.

Field Description	Type	Notes	Record Position	Max Length	Mandatory/Optional
Record Type	Numeric	Must be '3'	1	1	Mandatory
Batch Total Amount	Numeric	The amount is in cents. No dollar signs, commas or decimal points	2	11	Mandatory
Number of Transactions	Numeric	Total number of Transactions	3	5	Mandatory
Hash Total	Numeric	Sum of Branch / Account Numbers, overflow Ignored.	4	11	Mandatory

Note: The hash total is calculated using the branch and account numbers in each transaction record. The bank number and account suffix are not used when calculating the hash total. If the account number is 8 digits then the left most digit is excluded from the calculations.

Example:

```
01 0123 0456789 00
06 0475 0123456 02
11 6100 1234567 040
03 0321 00987654 030
7019 2802466
```

The hash total is therefore 70192802466.

If the hash total is more than 11 characters, exclude the additional characters on the left.

4.3 NZ CSV without Control Record

The NZ CSV without Control Record file format allows a user to import a CSV file containing payment details. The user will enter the header information when importing the file.

4.3.1 File Layout and Character Set

A valid NZ CSV without Control Record consists of only one record type - Detail Record. NZ Domestic Payment detail items will be created for each Detail Record in the CSV file.

The format specifications for the Detail Record are outlined in detail further in this document.

The following alphanumeric fields are supported in a CSV file:

- A..Z, 0..9, spaces and other keyboard characters (except commas which are treated as field separators)
- Numeric fields should only have digit values (0-9)

4.3.2 Detail Record

Each Detail Record contains information used to create one payment instruction (Detail Item).

There may be many Detail Records in one CSV file. Other required detail item fields are inherited from the Batch Header and can subsequently be changed.

All fields must be separated by a comma (,) and each record will end with CRLF (carriage-return/line feed).

Field Description	Type	Notes	Record Position	Max Length	Mandatory /Optional
Transaction Amount	Numeric	The dollar amount of the transaction. This can be expressed either in whole dollars or in dollars and cents, e.g. 12 is read as 12.00 12. is read as 12.00 12.3 is read as 12.30 12.34 is read as 12.34 Commas cannot be used to separate '000s. The maximum allowable value is \$99,999,999.99.	1	10 (or 11 if decimal point is included)	Mandatory
Account Number	Alphanumeric	The account number of the other party. The account number must contain 17 digits, in the 2-4-8-3 format with optional hyphens, e.g. 06-0501-00123456-000 or 06050100123456000 bank-branch-account base- account suffix The base number and suffix portions should be RIGHT JUSTIFIED (i.e. zero-filled to the left), e.g. 06-0501-0123456-02 (in 2-4-7-2 format) must be represented as 06-0501-00123456-002 (in 2-4-8-3 format).	2	20	Mandatory
Other Party Name	Alphanumeric	The name of the other party. Free format alphanumeric text.	3	32	Mandatory
Originator Reference	Alphanumeric	The Reference that will appear on the customer's bank statement. Free format alphanumeric text.	4	12	Optional
Originator Analysis Code	Alphanumeric	The Analysis Code that will appear on the customer's bank statement. Free format alphanumeric text.	5	12	Optional
Originator Particulars	Alphanumeric	The Particulars that will appear on the customer's bank statement. Free format alphanumeric text.	6	12	Optional
Other Party Reference	Alphanumeric	The Reference that will appear on the other party's bank statement. Free format alphanumeric text.	7	12	Optional
Other Party Analysis Code	Alphanumeric	The Analysis Code that will appear on the other party's bank statement. Free format alphanumeric text.	8	12	Optional
Other Party Particulars	Alphanumeric	The Particulars that will appear on the other party's bank statement. Free format alphanumeric text.	9	12	Optional

5 MT101 FILE FORMAT

The MT101 file format, available in Australia and New Zealand only, allows a user to import an MT101 file into ANZ Transactive – Global as one or more payment instructions. Each payment instruction is processed as a single batch. The supported payment types are RTGS, Same Day Cleared Payment (SCP) and International.

5.1 File Naming Convention

Not applicable.

5.2 MT101 File Layout and Character Set

The MT101 message contains four (4) blocks of information. One or more transactions can be presented in the file; each payment instruction will begin with a block 1 and end with a block 4.

Block	Title	Mandatory/Optional	Comments
1	Sending financial institution	Mandatory	Block 1 is mandatory and must begin with "{1: F01" and end with "}" Example for ANZ Australia: {1: F01 ANZBAU3MXXX} Example for ANZ New Zealand: {1: F01 ANZBNZ22XXX}
2	Message Type/Receiving financial institution	Mandatory	Block 2 is mandatory and for International, RTGS and Same Day Cleared Payments must contain the SWIFT BIC of the Bank that owns the funding account. Example for ANZ Australia: {2: I 101 ANZBAU3MXXX} Example for ANZ New Zealand: {2: I 101 ANZBNZ22XXX}
3	Additional Tag Information	Optional	Block 3 is optional. If present must begin with "{3:" and end with "}". Not used by ANZ Transactive – Global.
4	Sequence A and Sequence B	Mandatory	Block 4 is mandatory and must begin with "{4:" and end with "-}". This block contains Sequence A and Sequence B – see below for further details.

5.3 Character Set

The following character set is allowed in an MT101 import file:

- Fields that are marked '**Alpha**' (Alphanumeric) in the 'Type' column are limited to:
 - Letters: A-Z, a-z
 - Numbers: 0-9
 - The following Characters: spaces (), apostrophes ('), commas (,), hyphens (-), full stops (.), forward slashes (/), plus sign (+), left parenthesis ((), right parenthesis ()), colon (:), question mark (?)
- Fields that are marked '**Numeric**' in the 'Type' column are limited to:
 - Numbers: 0-9

Note: Braces ('{' and '}') are used to identify the beginning and end of each block as outlined previously, but they cannot be used anywhere else in an MT101 file. As such they have not been included in the character set above.

5.4 Sequence A – General Information

Tag	Field Description	Type	Length	Notes	Mandatory / Optional
:20:	Sender's Reference	Alpha	16	Reference number to link payment to originating system.	Mandatory
:21R:	Customer reference	Alpha	16	The customer reference associated with the payment. If 21R is not supplied then tag 21 in sequence B will be used as the customer reference.	Optional
:28D:	Message Index/Total	Numeric	5n/5n	Always '00001/00001'. ANZ supports a single sequence B.	Mandatory
:50H:	Ordering Customer	Alpha	34	Funding account preceded by '/'. BSB should be included where applicable. Name and address need not be entered. Must be provided in either sequence A or B but not in both. Optional for BSB to be included in either tag 50H or 52A but mandatory to be provided in either 50H or 52A.	Optional
:52A:	Account Servicing Institution	Alpha	11	SWIFT code pertaining to the funding account of the payment. May be provided in either sequence A or B but not in both. If populating then provide: Optional national clearing system code preceded by a double slash ('//'). E.g., for Australia, populate with '//AU' and the six number funding account BSB. Mandatory 11 character SWIFT code pertaining to the funding account of the payment. If only 8 characters known then pad with trailing "XXX", e.g. "ANZBAU3MXXX" Optional for BSB to be included in either tag 50H or 52A but mandatory to be provided in either 50H or 52A.	Optional
:30:	Requested Execution Date	Numeric	6	The payment date in format YYMMDD (e.g. 180101)	Mandatory

5.5 Sequence B – Transaction Detail Record

Tag	Field Description	Type	Length	Notes	Mandatory/Optional
:21:	Transaction Reference	Alphanumeric	16	Customer reference associated with the payment	Mandatory
:21F:	F/X Deal Reference	Alpha	16	Forward Exchange Contract reference if an international payment. Mandatory if tag 36 is populated.	Optional
:23E:	Instruction Code	Alphanumeric	4 x 30	Specific instructions provided by the ordering customer to the account servicing institution. The system will only accept up to four instruction codes. For NZ Same Day Cleared Payment the instruction code 'OTHR/EMAIL/' can be provided to enter the beneficiaries email address E.g. :23E: OTHR/EMAIL/jsmith@abc.com For email addresses across multiple lines each additional line must start with 23E://	Conditional
:32B:	Currency and Transaction amount	Alphanumeric	3 –15	Payment currency and amount. E.g. USD1234,56 (note ',' convention) Amount can be 0 if 33B is specified. For payments in Currencies with no decimal place, no values should be provided after the decimal place (E.g. JPY100,)	Mandatory
:50H:	Ordering Customer	Alpha	34	Funding account preceded by '/'. BSB should be included where applicable. Name and address need not be entered. Must be provided in either sequence A or B but not in both Optional for BSB to be included in either tag 50H or 52A but mandatory to be provided in either 50H or 52A.	Optional
:52A:	Account Servicing Institution	Alpha	11	SWIFT code pertaining to the funding account of the payment. May be provided in either sequence A or B but not in both. If populating then provide: Optional national clearing system code preceded by a double slash ('//'). E.g., for Australia, populate with "//AU" and the six number funding account BSB. Mandatory 11 character SWIFT code pertaining to the funding account of the payment. If only 8 characters known then pad with trailing "XXX", e.g. "ANZBAU3MXXX" Optional for BSB to be included in either tag 50H or 52A but mandatory to be provided in either 50H or 52A.	Optional
:56A: <u>OR</u>	Intermediary Institution	Alpha	11	Bank code of Intermediary Bank. Can be one of the following: SWIFT BIC	Optional
:56C: <u>OR</u>	Intermediary Institution	Alpha	15	Domestic Clearing Code of Intermediary Bank, // followed by a two letter clearing system code and party identifier E.g. //XXnn..nn Where XX is the country Clearing System Code	

Tag	Field Description	Type	Length	Notes	Mandatory/Optional
:56D:	Intermediary Institution	Alpha	5 x 35	Line 1: Bank code of Intermediary bank. Can be one of the following: • Clearing code (format //XXnnn...nn) Line 2: Intermediary Bank name. Line 3: Intermediary Bank address line 1. Line 4: Intermediary Bank address line 2. Line 5: Intermediary Bank country (must be ISO compliant format). Lines 1, 2, 3 and 5 are mandatory. Note: Tag :56D: should only be used if bank code of Intermediary Bank is unknown to ANZ Transactive – Global.	
:57A:	Account With Institution	Alpha	11	Bank code of beneficiary bank. Can be one of the following: SWIFT BIC The following clearing codes are accepted in 57A, however it is preferable that they are used in field 57C: BSB for RTGS AU (format //AUnnnnnn) BB for SCP NZ (format //NZnnnnnn)	Mandatory
<u>OR</u>					
:57C:		Alpha	15	Domestic Clearing Code of beneficiary bank, // followed by a two letter clearing system code and party identifier E.g. //XXnn..nn Where XX is the country Clearing System Code	
<u>OR</u>					
:57D:		Alpha	5 x 35	Line 1: Bank code of beneficiary bank. Can be one of the following: BSB for RTGS AU (format //AUnnnnnn) BB for SCP NZ (format //NZnnnnnn) Clearing code (format //XXnnn...nn) Line 2: Beneficiary Bank name. Line 3: Beneficiary Bank address line 1. Line 4: Beneficiary Bank address line 2. Line 5: Beneficiary Bank country (must be ISO compliant format). Lines 1, 2, 3 and 5 are mandatory. Note: Tag :57D: should only be used if bank code of Beneficiary Bank is unknown to ANZ Transactive – Global.	
:59:	Beneficiary	Alpha	5x35	Line 1: Account of the payment Beneficiary preceded by a '/'. Line 2: Beneficiary Name Line 3: Address Line 1 or Country Code/Name or blank Line 4: Address Line 2 or Country Code/Name or blank Line 5: City or Country Code/Name or blank. 6 BPAY FILE FORMAT (AUSTRALIA ONLY)

The file format for importing BPAY payments is the Batch Entry Method (BEM) format. This format allows a user to submit multiple BPAY payments to one or more billers in a single file. Each payment instruction is processed as a single batch. Only Australian domiciled accounts can be used to fund these payments.

6.1 BPAY File Layout and Character Set

A valid BPAY file consists of the following record types:

- A File Header Record
- Payment Instruction Record(s)
- A File Trailer Record

The following character set is allowed in a BPAY file:

- Fields that are marked 'Alpha' (Alphanumeric) in the 'Type' column are limited to:
 - Letters: A-Z, a-z
 - Numbers: 0-9
 - The following Characters: spaces (), ampersands (&), apostrophes ('), commas (,) , hyphens (-), full stops (.), forward slashes (/), plus sign (+), dollar sign (\$), exclamation mark (!), percentage sign (%), left parenthesis ((), right parenthesis ()), asterisk (*), number sign (#), equal sign (=), colon (:), question mark (?), left square bracket ([), right square bracket (]), underscore (_), circumflex (^) and the at symbol (@)
 - 'Optional' Alphanumeric fields must be filled with spaces if no data exists
- Fields that are marked 'Numeric' in the 'Type' column are limited to:
 - Numbers: 0-9
 - 'Optional' Numeric fields must be filled with zeros if no data exists
 - Unless otherwise indicated, numeric fields should be right justified and blank filled

ANZ Transactive – Global requires BPAY Import files to be prepared as 201 byte fixed length records and must be separated by CRLF (carriage-return/line feed, Hex 0D0A). This must be consistent for the whole file.

6.2 File Header Record

The File Header Record contains BPAY Payment header details.

Field Description	Type	Notes	Start Position	End Position	Length	Mandatory/Optional
Record Type	Numeric	A code '00' indicating the Header record	1	2	2	Mandatory
Payer Institution Code	Alphanumeric	The Institution Code that is to receive the file. For example ANZ, 114, C02, etc.	3	5	3	Mandatory
File Creation Date	Numeric	Format YYYYMMDD. The local date of file creation.	6	13	8	Mandatory
File Creation Time	Numeric	Format HHMMSS. The local time of file creation.	14	19	6	Mandatory
File Number	Numeric	The unique file number for the file creation date	20	22	3	Mandatory
Filler	Alpha	Spaces	23	201	179	Mandatory

6.3 Payment Instruction Record

The Payment Instruction Record contains information used to create the BPAY Payment.

Field Description	Type	Notes	Start Position	End Position	Length	Mandatory/Optional
Record Type	Numeric	A code '50' indicating a Payment Instruction record	1	2	2	Mandatory
Payer Institution Code	Alphanumeric	The Code representing the Payer Institution. For example ANZ, 114, C02, etc.	3	5	3	Mandatory
Payment Account Detail	Alphanumeric	The relevant account number of the payer (BSB and account number), left justified with trailing spaces.	6	25	20	Mandatory
Country of Payment	Alpha	The ISO alphabetic country code in which the Payer's Account resides. This will be the code for Australia.	26	28	3	Optional
State of Payment	Alpha	The alphanumeric state in which the Payer's account resides, if the country has state codes.	29	31	3	Optional
Currency Code of Payment	Alpha	The ISO alphabetic code denoting the currency of Payment. This should be the code for Australian Dollars (AUD).	32	34	3	Mandatory
Biller Code	Numeric	The CIP assigned number denoting the Biller	35	44	10	Mandatory
Service Code	Numeric	Reserved for future use. Currently zero filled. e.g. "0000000"	45	51	7	Mandatory
Customer Reference Number	Alphanumeric	The number by which the Biller identifies the account that is being paid. Left Justified, filled with trailing spaces. The leading non-space part must be all numeric.	52	71	20	Mandatory
Amount	Numeric	The amount of the Payment, 2 digits of cents implied	72	83	12	Mandatory
BPAY Settlement Date	Numeric	The date is used for forward dating files, in YYYYMMDD format. If left blank, the date will default to the current business day.	84	91	8	Optional
Payer Name	Alphanumeric	The name of the Batch Payer	92	131	40	Optional
Additional Reference Code	Alphanumeric	Not required	132	151	20	Optional
Discretionary Data	Alphanumeric	Not required	152	201	50	Optional

6.4 File Trailer Record

Field Description	Type	Notes	Start Position	End Position	Length	Mandatory/Optional
Record Type	Numeric	A code '99' indicating the Trailer record.	1	2	2	Mandatory
Payer Institution Code	Alphanumeric	Same value as Header record.	3	5	3	Mandatory
File Creation Date	Numeric	Same value as Header record.	6	13	8	Mandatory
File Creation Time	Numeric	Same value as Header record.	14	19	6	Mandatory
File Number	Numeric	Same value as Header record.	20	22	3	Mandatory
Number of Payments	Numeric	The total number of Payment Instructions in the file.	23	31	9	Mandatory
Amount of Payments	Numeric	The total amount of Payment Instructions in the file, 2 digits of cents implied.	32	46	15	Mandatory
Filler	Alpha	Spaces	47	201	155	Mandatory

7 BTR AND RETURNED ITEMS FILE FORMATS

This section defines the Balance and Transaction and Returned Items file formats available in ANZ Transactive – Global.

7.1 BAI File

A BAI formatted file will be generated using the BAI 2.0 standard.

If a file is manually generated and if there are no account or transaction details available an empty file will be created. An empty BAI file will only contain a 01 (Header) and a 99 (Trailer) record.

Each line in a BAI formatted file has a maximum length of 80 characters.

7.1.1 Reserved Characters

Commas (,) and slashes (/) are used only as delimiters in the BAI Export format:

- **Comma (,)** delimits fields
- **Slash (/)** delimits the end of the logical record
- Adjacent delimiters such as comma-comma (,,) or comma-slash (,/) identify defaulted or unspecified fields

Where records contain commas or slashes, they will be replaced so as not to confuse the characters with delimiters as follows:

- If a field value contains a comma (,) it will be replaced with a space ()
- If a record contains a slash (/) it will be replaced with a hyphen (-)

7.1.2 BAI File Layout

Record Type	Record Name	Description/Notes	Mandatory/Optional
01	File Header	Indicates the beginning of the file. There is only one File Header record per BAI file.	Mandatory
02	Group Header	Identifies a group of accounts for each originating financial institution per post date in the file. There may be more than one Group Header record per file. Additional Group Header records will follow the Group Trailer (98) record of the previous group in the file.	Optional
03	Account Identifier and Summary Status	Identifies each account number and reports account summary and account balance status items. There will be one Account Identifier and Summary Status record for each account number requested. There may be many Account Identifier and Summary Status records for each Group Header (02) record in the file.	Optional
16	Transaction Detail	Reports transaction detail. There may be many Transaction Detail records for each Account Identifier and Summary Status (03) record in the file.	Optional
88	Continuation Record	Used if the data in any record exceeds the physical record size (80 characters) or needs to be divided for any reason. There may be many continuation records in a BAI file. Note: A continuation (88) record can follow any record type, including another continuation (88) record. It will not necessarily follow a transaction (16) record – it has been included in here to illustrate a possible BAI file layout only.	Optional
49	Account Trailer	Provides account level control totals. There will be one Account Trailer per Account Identifier and Summary Status (03) record.	Optional
98	Group Trailer	Provides group level control totals. There will be one Group Trailer record per Group Header (02) record.	Optional
99	File Trailer	Indicates the end of the logical file. There is only one File Trailer (99) record per BAI file.	Mandatory

Important: The above table depicts a simple BAI file layout with only one instance of each record type. Some records may appear multiple times in a single BAI export – please refer to Description/Notes above and the record formats that follow.

7.1.3 File Header Record

The file header record marks the beginning of the file, identifies the sender and receiver of the transmission and describes the file's structure.

Only one '01 - File Header record' will be written per BAI file.

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '01'	Mandatory
2	Sender Identification	Default value 'ANZ'	Mandatory
3	Receiver Identification	Not used by ANZ Transactive – Global	Mandatory
4	File Creation Date	Sender date.YYMMDD.	Mandatory
5	File Creation Time	Server time and time-zone. HHMM 24 hour format.	Mandatory
6	File Identification Number	Identification number defined by the sender. The number will be new for each file with the same file creation date. Used to identify uniquely those files transmitted between a sender and a receiver on a given date.	Mandatory
7	Reserved	Not used by ANZ Transactive – Global	Optional
8	Reserved	Not used by ANZ Transactive – Global	Optional
9	Version Number	Always '2'	Mandatory
10	Delimiters	Always '/'	Mandatory

7.1.4 Group Header Record

The Group Header identifies a group of accounts, all of which are from the same originator on the same date.

Only one '02 - Group Header Record' will be written for each Bank Code per Post Date in the BAI file.

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '02'	Mandatory
2	Ultimate Receiver Identification	Always blank	Optional
3	Original Identification	Originating Bank BIC	Mandatory
4	Group Status	Always '1'	Mandatory
5	As-of-Date	The post date of items included in this Group. YYMMDD	Mandatory
6	As-of-Time	HHmm – set to 0000	Mandatory
7	Reserved	Not Used by ANZ Transactive – Global. Always blank	Optional
8	As-of-Date Modifier	Always '2'	Optional
9	Delimiters	Always '/'	Mandatory

7.1.5 Account Identifier and Summary Status Record (03)

This record identifies the account number and/or reports account summary and account balance status items. Summary information may be accompanied by an item count.

At least one 03 Account Identifier and Summary Status record will be written for each account number requested.

Type 03 records may report several different status and/or summary amounts for the same account. For example, a single 03 record might report ledger balance and available balance as well as the amount, item count and funds type for total credits and total debits. The 'Type Code', 'Amount', 'Item Count' and 'Funds Type' fields are repeated to identify each status or summary type.

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '03'	Mandatory
2	Account Number	Account number at originator financial institution. The field is alphanumeric and includes significant leading zeroes.	Mandatory
3	Currency Code	Currency code of the account	Mandatory
4	Type Code	Identifies the type of summary of status data. Default indicates that no status or summary data are being reported. Type Code Ranges: 010-099: Account status type codes 100: Total credits summary type code 101-399: Credit summary and detail type codes 400: Total debits summary type code 401-699: Debit summary and detail type codes 900-999: Customized type codes Refer to Appendix A for a list of BAI codes.	Optional
5	Amount	Decimal places are implied based on Currency Code. Status amounts are signed positive + or negative -. Default of sign is positive. Summary amounts may only be positive or unsigned. Default of field indicates that no amount is being reported.	Optional
6	Item Count	Integer field. Default is 'unknown'. For summary type codes only; will be defaulted for status type codes.	Optional
7	Funds Type	Always null	Optional
8	Reserved	Not used by ANZ Transactive – Global	Optional
9	Reserved	Not used by ANZ Transactive – Global	Optional
10	Reserved	Not used by ANZ Transactive – Global	Optional
11	Delimiters	Always '/'	Mandatory

7.1.6 Transaction Detail Record (16)

This record reports transaction details with the accompanying text and reference numbers.

Only one '16 - Transaction Detail Record' will be written for each item available for each requested account.

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '16'	Mandatory
2	Type Code	Identifies the type of detail data (e.g. 399, 699, etc.) Refer to Appendix A for a list of BAI codes	Mandatory
3	Amount	Decimal places are implied based on the Currency Code in the Group Header (02) or Account Identifier (03) record. Always positive (unsigned) and expressed without a decimal. Default indicates that no amount is being reported.	Optional
4	Value Date	The value date of the transaction. This is only applicable if the BAI report is created with the 'Value Date Required' option selected. E.g. V141206	Optional
5	Bank Reference Number	Alphanumeric field defined by the originator. Will not contain a comma (,) or slash (/).	Optional
6	Customer Reference Number	Alphanumeric field defined by the originator. Will not contain a comma (,) or slash (/).	Optional
7	Text	Alphanumeric field defined by the originator. Will not contain a comma (,) or slash (/).	Optional
8	Delimiters	Always '/'	Mandatory

7.1.7 Continuation Record (88)

If the data in any type of record exceeds the physical record size (80 characters), or if dividing the record is desirable for any other reason, an 88 Continuation Record allows the data to continue in the same format.

A Continuation Record may follow any type of record, including another continuation (88).

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '88'	Mandatory
2	(Next Field)	The Record Code field is followed by a continuation of the preceding record. The format is exactly the same as in the preceding record. If the preceding record ended within a text field, the text continues in the 88 record. If the preceding record did not end within a text field, the 88 record continues with whatever field follows the final field in the preceding physical record. If a non-text field begins in one record, it will be completed in that record. The following 88 record may continue with the next field.	Optional
3	Delimiters	Delimiters are the same as for the preceding record. If the preceding physical record does not end within a text field, it will end with the delimiter slash (/), even if the following continuation (88) includes or begins with text. If the preceding physical record ends within text that is to be continued, no delimiter will be placed at the end of that record.	Mandatory

7.1.8 Account Trailer Record (49)

The Account Trailer Record provides account level control totals. There will be a 49 Account Trailer Record for each 03 record.

All 16 and 88 records between the 03 record and the 49 record refer to the account identified in the 03 record.

One '49 - Account Trailer Record' will be written for each requested account.

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '49'	Mandatory
2	Account Control Total	Sum of all Amount fields in the preceding type 03 records and all type 16 and 88 records associated with that account. The total does not include amounts reported in Funds Type or Item Count fields. This field includes the sign + or - for the total. If no sign precedes the total, the default is positive. Note: If records have been generated with 'Value Date Required' selected when generating the report in Report Profiles or Scheduled Reports screen, the Debit and/or Credit Interest Rate will not be included in the total.	Mandatory
3	Number of Records	Integer. The total number of records in the account, including the 03 records and all 16 and 88 records, and including this account trailer 49 record.	Mandatory
4	Delimiters	Always '/'	Mandatory

7.1.9 Group Trailer Record (98)

The Group Trailer Record provides group level control totals. There will be a 98 Group Trailer Record for each 02 record.

One '98 - Group Trailer Record' will be written for each Bank Code per Post Date.

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '98'	Mandatory
2	Group Control Total	Sum of account control totals from the BAI 49 records. This field includes the sign (+ or -) for the total. If no sign precedes the total, the default is positive.	Mandatory
3	Number of Accounts	Integer. The total number of 03 records in this group.	Mandatory
4	Number of Records	Integer. The total number of all records written for this group, including 02, 03, 16, 88, 49 and this 98 record.	Mandatory
5	Delimiters	Always '/'	Mandatory

7.1.10 File Trailer Record (99)

The File Trailer Record indicates the end of the logical file.

One '99 - File Trailer Record' will be written per BAI file.

Field	Description	Comments	Mandatory/Optional
1	Record Code	Always '99'	Mandatory
2	File Control Total	Sum of group control totals from the BAI 98 records. This field includes the sign (+ or -) for the total. If no sign precedes the total, the default is positive.	Mandatory
3	Number of Groups	Integer. The total number of 02 records in this file.	Mandatory
4	Number of Records	Integer. The total number of all records written for this file, including 01, 02, 03, 16, 88, 49, 98 and this 99 record.	Mandatory
5	Delimiters	Always '/'	Mandatory

7.2 Statement Files

The Statement File format consists of 2 separate files, a balance file that contains balance records for accounts and a transaction file that contains transaction records for accounts.

Two files will be created per export:

- Balance file, and
- Transaction file

The files will not contain any header or trailer records. All fields will be enclosed in double-quotes (") and separated by a comma (.). Each record will end with CRLF (carriage-return/line feed). Any fields containing null database values will contain double quotes as placeholders.

If the file is manually generated:

- It will contain balance and/or transaction records based in the selection criteria chosen by the user
- An empty file(s) containing no records will be created if no balances and/or transactions are available

If the file is scheduled:

- It will contain balance and/or transaction records.
- An empty file(s) containing no records will be created if no balances and/or transactions are available

7.3 SAP/Multicash Files

The SAP/Multicash File format consists of 2 separate files, a balance file that contains balance records for accounts and a transaction file that contains transaction records for accounts.

Two files will be created per export:

- Balance file
- Transaction file

The files will not contain any header or trailer records. All fields will be separated by a semi-colon (;). If a field contains a semi-colon it will be replaced with a space. Each record will end with CRLF (carriage-return/line feed, Hex 0D0A).

If the file is manually generated:

- It will contain balance and/or transaction records based on the selection criteria chosen by the user
- An empty file containing no records will be created if no balances or transactions are available.

If the file is scheduled:

- It will contain balance and/or transaction records.
- An empty file containing no records will be created if no balances or transactions are available.

7.4 NZ Statement Files (New Zealand Domestic Accounts only)

ANZ Transactive – Global allows the export of information into another application such as a spreadsheet or accounting software. The exported files are produced in one order only in CSV format. The files can then be manipulated to sort the row of information into any order Microsoft Excel allows.

The extract is made up of two different files:

- Balance file, containing one or more balance records
- Transaction file. For each account, the Transaction File contains the following within each date:
 - '3' (Transaction Record) (one or more)
 - '5' (Opening Balance Record)
 - '6' (Closing Balance Record)
 - '8' (Total Debits/Credits Record)
- The Transaction file also contains:
 - '9' (Grand Total Debits/Credits Record)
 - There are two of these records for each date, one for debit transactions and one for credit transactions. These records are the total of all the accounts for the date.

NZ Statement Files are in standard comma delimited format. All fields are separated by commas and alphanumeric fields are delimited by double quotes (""). All records are separated by a carriage return / line feed character.

If the file is manually generated:

- It will contain balance and transaction records based on the selection criteria.
- An empty file(s) containing no records will be created if no balances and transactions are available.

If the file is scheduled:

- It will contain balance and transaction records.
- An empty file(s) containing no records will be created if no balances and transactions are available.

7.4.1 NZ Statement File(s) – Balance File

There is one Balance Record for each account within each date.

8.2 APPENDIX B: USE OF AUXDOM/TRANCODE

This section offers advice on the use of Trancode/Auxdom in recognising transactions. Care should be exercised in using these codes as there are many ambiguities. These codes exist for a number of internal bank and interbank processing system uses rather than as a customer reporting tool, however they are reasonably indicative.

The things to be careful of are as follows:

1. The Trancode has 3 digits but only the last 2 are significant to define the transaction, the leading digit is mostly 0 but can be 9 or any other number that reflects the way it was processed.
2. TC 0-49 are debits and 50-99 are credits. This is the only absolutely consistent rule. Some transactions have ranges of Auxdoms rather than one specific Auxdom per TC. TC 00 (Cheque) the Auxdom is the cheque number.
TC 60, 70, 80 the Auxdom is the number of collection items deposited.
TC 8, 50-56 where the transaction came via Direct Entry the Auxdom is the DE User ID of the submitter.
3. New transaction codes and Auxdoms are occasionally added or discontinued without notice and a way of handling these exceptions must be accommodated.
4. Some Trancodes are ambiguous, in which case the underlying transaction is distinguished by other processing data not in the TC/Auxdom. In particular TC 00 applies to Cheques or OnLine Transfer (debit) or EDI debit.
5. Similarly TC50 or 70 can also apply to OnLine TRF, EDI Credit as well as the Direct Entry "Transfer" (TC50) and Agent Deposit (TC 70).
6. TC 70 also has a specific TC/Auxdom combination indicating certain Point of sale credits. The way these exceptions are recognised is by triggering Alphanumerics in the Traceline and exauxdom. If Bytes 9-10 is CX then the transaction originated from Direct Entry and that Trancode rule applies. If the second last byte of the exauxdom is H then the transaction will be OnLine TRF or EDI: EDI where the last Alphanumeric of the exauxdom is 8; TRF where the last Alphanumeric is 9.
7. Manual entries can have any Trancode but are usually 00 (debit) or 99 (credit). A manual entry will not consistently obey any code rules. The entering officer keys in the appropriate statement narrative and this is what appears on the statement whatever codes are used.

Alternatively the Tran Type has these anomalies removed and should be considered as a key to indicate the transaction type for automatic reconciliation.
